Augment One-to-One Skills Training with Repetition and Remote Support

Digital step-by-step instruction empowering individuals with cognitive disabilities on the job, at home, school or in the community.
How can avail accelerate individual progression?

Reduce high level support with tech-enabled prompts. Prompting tasks are short videos, pictures, audio or text depicting a sequence of steps where the individual is asked to perform each step at a time. avail’s self-directed learning builds confidence and provides 24/7 virtual support through repetition and reassurance.

Maximize resources, improve outcomes. There are many “what ifs” that may occur onsite when the job coach is not present. “What if an individual is struggling with a task, panic, and risk of breaking down while at work?” With the use of avail®, the user can reference the discreet, mobile tool for skill reinforcement, reducing onsite presence allowing the individual to fit more naturally, and in turn expand the capacity of existing staff to help more individuals.

Person-centered skills training. With avail’s individualized mobile solution, each task can easily be broken down into digital steps and adjusted based on goals, preferences, and progression. By customizing the experience, learners will engage with motivating content specific to the needs of each individual and receive positive reassurance with 24/7 remote support.
Easily modify steps and adjust goals with task-templates. Creating content and building out custom steps based on each individual's goals can be overwhelming -- especially for those who are not trained in task analysis. avail's time-saving templates are pre-built, easily customizable, and designed to guide the job coach, parent, or teacher through each step for quick implementation into programs.

Clear visibility into progression with built-in assessment. When paper-based task analysis and limited data collection are the methods used, an agency or school can only rely on the job coach or teacher's subjective view. Eliminate time-consuming one-to-one prompts and unreliable data collection - gain visibility into the success of the individual's progress with built-in assessment analytics and reporting.

Easy to learn and quick to implement -- for both you and your learners. You don't have time for countless training sessions, videos, or manuals. Designed with ease of use in mind, avail can be learned in mere hours and quickly implemented into your existing programs. Book 1:1 training sessions and support time when it's most convenient for you.
Can I receive financial support for avail?

State and federal supported programs. Funding poses one of the largest obstacles to the acquisition of assistive technology. Many individuals with disabilities and their families aren’t aware of all the financial support available. Now more than ever, vocational programs, schools and parents have familiarized and recognized the value in implementing remote support. Usage of smart devices and assistive technology while remote learning during the pandemic, bolstered confidence among individuals, which led to more government and state programs seeing the value in solutions like avail.

Did you know?

A request for avail or any assistive technology can be added to an individualized plan for employment at any time but it’s important to check with the agency supporting the individual or the vocational rehabilitation counselor during the assessment period if you learn the individual may benefit from implementing the technology.
